

Grade sheet/Feedback form Scientific writing - Literature review,

Authors:

The paper will be graded in two steps:

1. **Requirements:** in this step, the teacher will check whether the document meets the requirements stated below (such as word limit). Not meeting these requirements will result in a fail.
2. **Grading according to the Checklist:** In step two, the teacher will determine the final grade, which is based on the checklist below,
 - Final grades are a pass or a fail.
 - In case of a fail, you can use the feedback and rewrite your paper.

1. Requirements

The requirements for this assignment are:

1. The document is handed in ultimately at the deadline mentioned in the instructions.
2. The document contains 2000 words (+/- 10%), excluding abstract, title, headings, figures and table captions, list of references, and list of abbreviations. The word limits per section (see 8 and the checklist) are guidelines.
3. The article is formatted following the IEEE guidelines.
4. Your text is readable for your fellow students (your audience), which means that you may have to explain a bit more than you would have to do if you were writing for experts in your specialisation.
5. The document passes the plagiarism check.
 - a. All ideas, fragments, figures, and data that are based on other work, are accompanied by correct in-text citations.
 - b. In text-citations are formatted correctly and consistently following a specific output style.
6. The paper is written in correct English. The style is academic and relatively formal. It may contain minimal spelling or grammar mistakes.
7. The review of the literature (body text) contains at least nine scientific sources of sufficient quality. The total number of sources may be higher, as you may need more references to introduce relevant concepts in your paper.
8. The document contains the following sections (word limits are guidelines):
 - Title
 - Author & Affiliation,
 - Requirement: it contains student names, student numbers, submission date, course name, course code, teacher name
 - Abstract (150-250 words)
 - Requirement: it contains motivation, objective, methods, and conclusion
 - Introduction (200-300 words)
 - Method section (100-200 words) or integrated method part in the Introduction.
 - Body text with sections of your choice (+/- 1300-1400 words)
 - Requirement: this section contains appropriate section headings
 - Conclusion (+/- 200 words). The conclusion does not have to be a separate section. It may be part of the discussion. However, the conclusion should be easily recognizable.
 - List of references
 - Requirement: this section is formatted consistently according to a specific output style (IEEE)
9. The document contains the following statement on the use of generative AI in the Acknowledgement:

Statement on the use of generative AI

This article was written within the course EE4C01 Profile Orientation & Academic Writing. Total word count: ##### {here, enter the number of words of the parts that count towards the maximum word count}.

When writing this text, we: * {tick what applies, multiple options are possible if you used generative AI}:

- did not use generative AI.
- used generative AI to generate (parts of) the content of the text. Where applicable, we have justified this in a footnote and/or with an in-text citation.
- used generative AI for inspiration and/or to structure the text.
- used generative AI to improve the grammar, style and/or spelling of the text.

Grade sheet/Feedback form Scientific writing - Literature review,

Authors:

If the document does not meet the requirements above, the teacher will give the document a fail grade. You can hand in a new document at the deadline for the retake. This new document will count as a retake.

If you would like to deliberately deviate from the prerequisites, please confer with your teacher before you hand in the final document (preferably by email, so that you have a written copy of your agreement).

Grade sheet/Feedback form Scientific writing - Literature review,

Authors:

Component	Remarks
Text parts	
Abstract ☐ can be read as a stand-alone text ☐ is informative: includes - motivation - objective - method - results/argumentation - main conclusions ☐ key terms are clear to the intended readers	
Objective/Research question/Aim ☐ is presented consistently in Abstract, Introduction and Conclusion ☐ is specific enough ☐ can be answered with a literature study	
Introduction ☐ contains background information on the problem ☐ indicates a motive for the research / points out the problem in the present situation or previous research and argues why this issue should be resolved ☐ contains a research question or purpose statement which links to the motive (objective) ☐ contains the method used ☐ indicates the structure of the article (unless AIMRAD is used)	
Method ☐ explains which method was used to find suitable sources for the literature review ☐ explains how the results were filtered ☐ is formulated in such a way that it is replicable	
Sections in body text ☐ body text is divided in to functional sections with specific section headings ☐ information in the sections contribute to conclusion ☐ sections appear in a logical order <i>Results (in the form of actual results or sections building up to support the objective of the article)</i> ☐ contains a full account of all results (or refers to an appendix) ☐ contains tables and graphs to make the results clearer	
Conclusions and future prospects ☐ are clearly linked to the objective in the introduction ☐ indicate to what extent the research question has been answered ☐ follow logically from all the previous material ☐ are preferably followed by recommendations for further research (future prospects)	
Reference use	
Use of sources ☐ sources are relevant and trustworthy ☐ when ideas, fragments, figures and data have been quoted from other work, they are accompanied by correct in-text citations (IEEE-style) ☐ literal quotations have quotation marks and page numbers ☐ paraphrases are not too close to the original	
Bibliography/List of references ☐ the references and bibliography meet the requirements (IEEE-style) ☐ every reference in the text corresponds to an item in the bibliography and vice versa	
Argumentation & structure	
Argumentation ☐ the elements of the scientific argumentation model are clearly recognizable ☐ is clear and well structured	

Grade sheet/Feedback form Scientific writing - Literature review,

Authors:

☐ the reasoning is built upon sources ☐ contains a critical comparison of multiple sources	
Storyline ☐ there is a clear storyline/main theme throughout the paper ☐ the conclusion matches the introduction and the intermediate sections lead the reader from introduction to conclusion	
Paragraphs ☐ are well-constructed ☐ are not too long: each paragraph discusses one topic ☐ contain a clear topic sentence showing the topic of that paragraph and a link to the previous paragraph ☐ are divided into a clear paragraph structure	
Style	
☐ correct use of English: understandable, no spelling errors, acceptable grammar, no lexical mistakes ☐ the style used is appropriate to an academic register: objective, relatively formal and concise ☐ the writing style is clear and reader friendly: sentences are not too long or complicated and there is no ambiguity	
Illustrations and layout	
Tables and figures ☐ all have a number and a caption ☐ all are referred to at least once in the text ☐ if copied, they contain a reference ☐ can be interpreted on their own (e.g. by means of a legend)	
Format: ☐ functional font (type and size) ☐ headings are easily recognizable ☐ professional page lay-out	
Overall score:
